

E607: Perturbation theory for a ring + scatterer

Submitted by: **Katya Pupko**

The problem:

Consider a particle with mass m and charge q , on a one dimensional ring, length L .

There is a scatterer in the ring which is described by $V(x) = u \cos(\frac{2\pi x}{L})$.

Calculate the second order correction to the energy in u (for any n).

The Solution:

Should be polished.

The Hamiltonian that describes the system is:

$$H = \frac{p^2}{2m} + V(x)$$

The Hamiltonian has symmetry with respect to reflections. The basis we chose to work with complies with the reflection symmetry (the even/odd states):

$$|n=0\rangle = \sqrt{\frac{1}{L}}$$

$$|n_{\text{odd}}\rangle = \sqrt{\frac{2}{L}} \sin\left(\frac{2\pi n x}{L}\right)$$

$$|n_{\text{even}}\rangle = \sqrt{\frac{2}{L}} \cos\left(\frac{2\pi n x}{L}\right)$$

The perturbation does not couple the odd states to the even states. So we focus on the perturbation's influence on the even states, and the odd states.

$$V_{nm} = \langle m | V(x) | n \rangle$$

For the even states:

$$V_{0,1} = V_{1,0} = \int_L^0 \frac{2}{L} \cos\left(\frac{2\pi x}{L}\right) u \cos\left(\frac{2\pi x}{L}\right) dx = \frac{u}{\sqrt{2}}$$

$$V_{nm}(\text{even}) = \int_L^0 \frac{2}{L} \cos\left(\frac{2\pi n x}{L}\right) \cos\left(\frac{2\pi m x}{L}\right) u \cos\left(\frac{2\pi x}{L}\right) dx$$

$$V_{nm}(\text{even}) = \frac{2}{L} u \int_L^0 \frac{1}{2} \left(\cos\left(\frac{2\pi x(n-m)}{L}\right) + \cos\left(\frac{2\pi x(n+m)}{L}\right) \right) \cos\left(\frac{2\pi x}{L}\right) dx = \frac{u}{2} \delta_{|n-m|,1}$$

For the odd states:

$$V_{nm}(\text{odd}) = \int_L^0 \frac{2}{L} \sin\left(\frac{2\pi n x}{L}\right) \sin\left(\frac{2\pi m x}{L}\right) u \cos\left(\frac{2\pi x}{L}\right) dx$$

$$V_{nm}(\text{odd}) = \frac{2}{L} u \int_L^0 \frac{1}{2} \left(\cos\left(\frac{2\pi x(n-m)}{L}\right) - \cos\left(\frac{2\pi x(n+m)}{L}\right) \right) \cos\left(\frac{2\pi x}{L}\right) dx = \frac{u}{2} \delta_{|n-m|,1}$$

The perturbation matrix for the block that belongs to the even and odd states:

$$V_{nm}(\text{even}) = \frac{u}{2} \begin{pmatrix} 0 & \sqrt{2} & 0 & \dots\dots \\ \sqrt{2} & 0 & 1 & \dots\dots \\ 0 & 1 & 0 & \dots\dots \\ 0 & 0 & 1 & \\ \cdot & & & \cdot \\ \cdot & & & \cdot \end{pmatrix}$$

$$V_{nm}(\text{odd}) = \frac{u}{2} \begin{pmatrix} 0 & 1 & 0 & \dots\dots\dots \\ 1 & 0 & 1 & \dots\dots\dots \\ 0 & 1 & 0 & \dots\dots\dots \\ 0 & 0 & 1 & \\ \cdot & & & \cdot \\ \cdot & & & \cdot \end{pmatrix}$$

Therefore the corrections to the energy:

The first order corrections to the energy levels:

$$E_{n \neq 0}^{[1]} = V_{n_0, n_0} = 0$$

The zero order energy is given by:

$$E_n = \frac{2\pi^2 n^2}{mL^2}$$

So the correction of the second order is:

For $n = 0$:

$$E_0^{[2]} = \sum_{l \neq 0} \frac{|\langle 0|V|l \rangle|^2}{E_0 - E_l} = \sum_{l \neq 0} \frac{|V_{0l}|^2}{0 - \frac{2\pi^2 l^2}{mL^2}} = -\frac{mL^2}{4\pi^2} u^2$$

For $n = 1, 2, 3, \dots\dots$:

$$E_n^{[2]} = \sum_{l \neq n} \frac{|\langle n|V|l \rangle|^2}{E_n - E_l} = \sum_{l \neq 0} \frac{|V_{nl}|^2}{\frac{2\pi^2 n^2}{mL^2} - \frac{2\pi^2 l^2}{mL^2}} = \sum_{l \neq n} \frac{1}{\frac{2\pi^2 n^2}{mL^2} - \frac{2\pi^2 l^2}{mL^2}} \left(\frac{u}{2}\right)^2$$

The matrix elements are all zero, except for $l=n+1$ and $l=n-1$. So the expression for the second order correction is:

$$E_n^{[2]} = \frac{mL^2}{8\pi^2} \left(\frac{1}{2n-1} - \frac{1}{2n+1} \right) u^2$$

And the correction to the ground state energy, up to the second order is:

$$E_n = E_n^{[0]} + E_n^{[1]} + E_n^{[2]}$$

For $n = 0$:

$$E_0 = 0 + 0 - \frac{mL^2}{4\pi^2} u^2 = -\frac{mL^2}{4\pi^2} u^2$$

For $n \neq 0$:

$$E_n = \frac{2n^2\pi^2}{mL^2} + 0 + \frac{mL^2}{8\pi^2} \left(\frac{1}{2n-1} - \frac{1}{2n+1} \right) u^2$$

$$E_n = \frac{2n^2\pi^2}{mL^2} + \frac{mL^2}{8\pi^2} \left(\frac{1}{2n-1} - \frac{1}{2n+1} \right) u^2$$
